

ERNIKA CLUBHOUSE

06.02.25

DESIGN SUMMARY

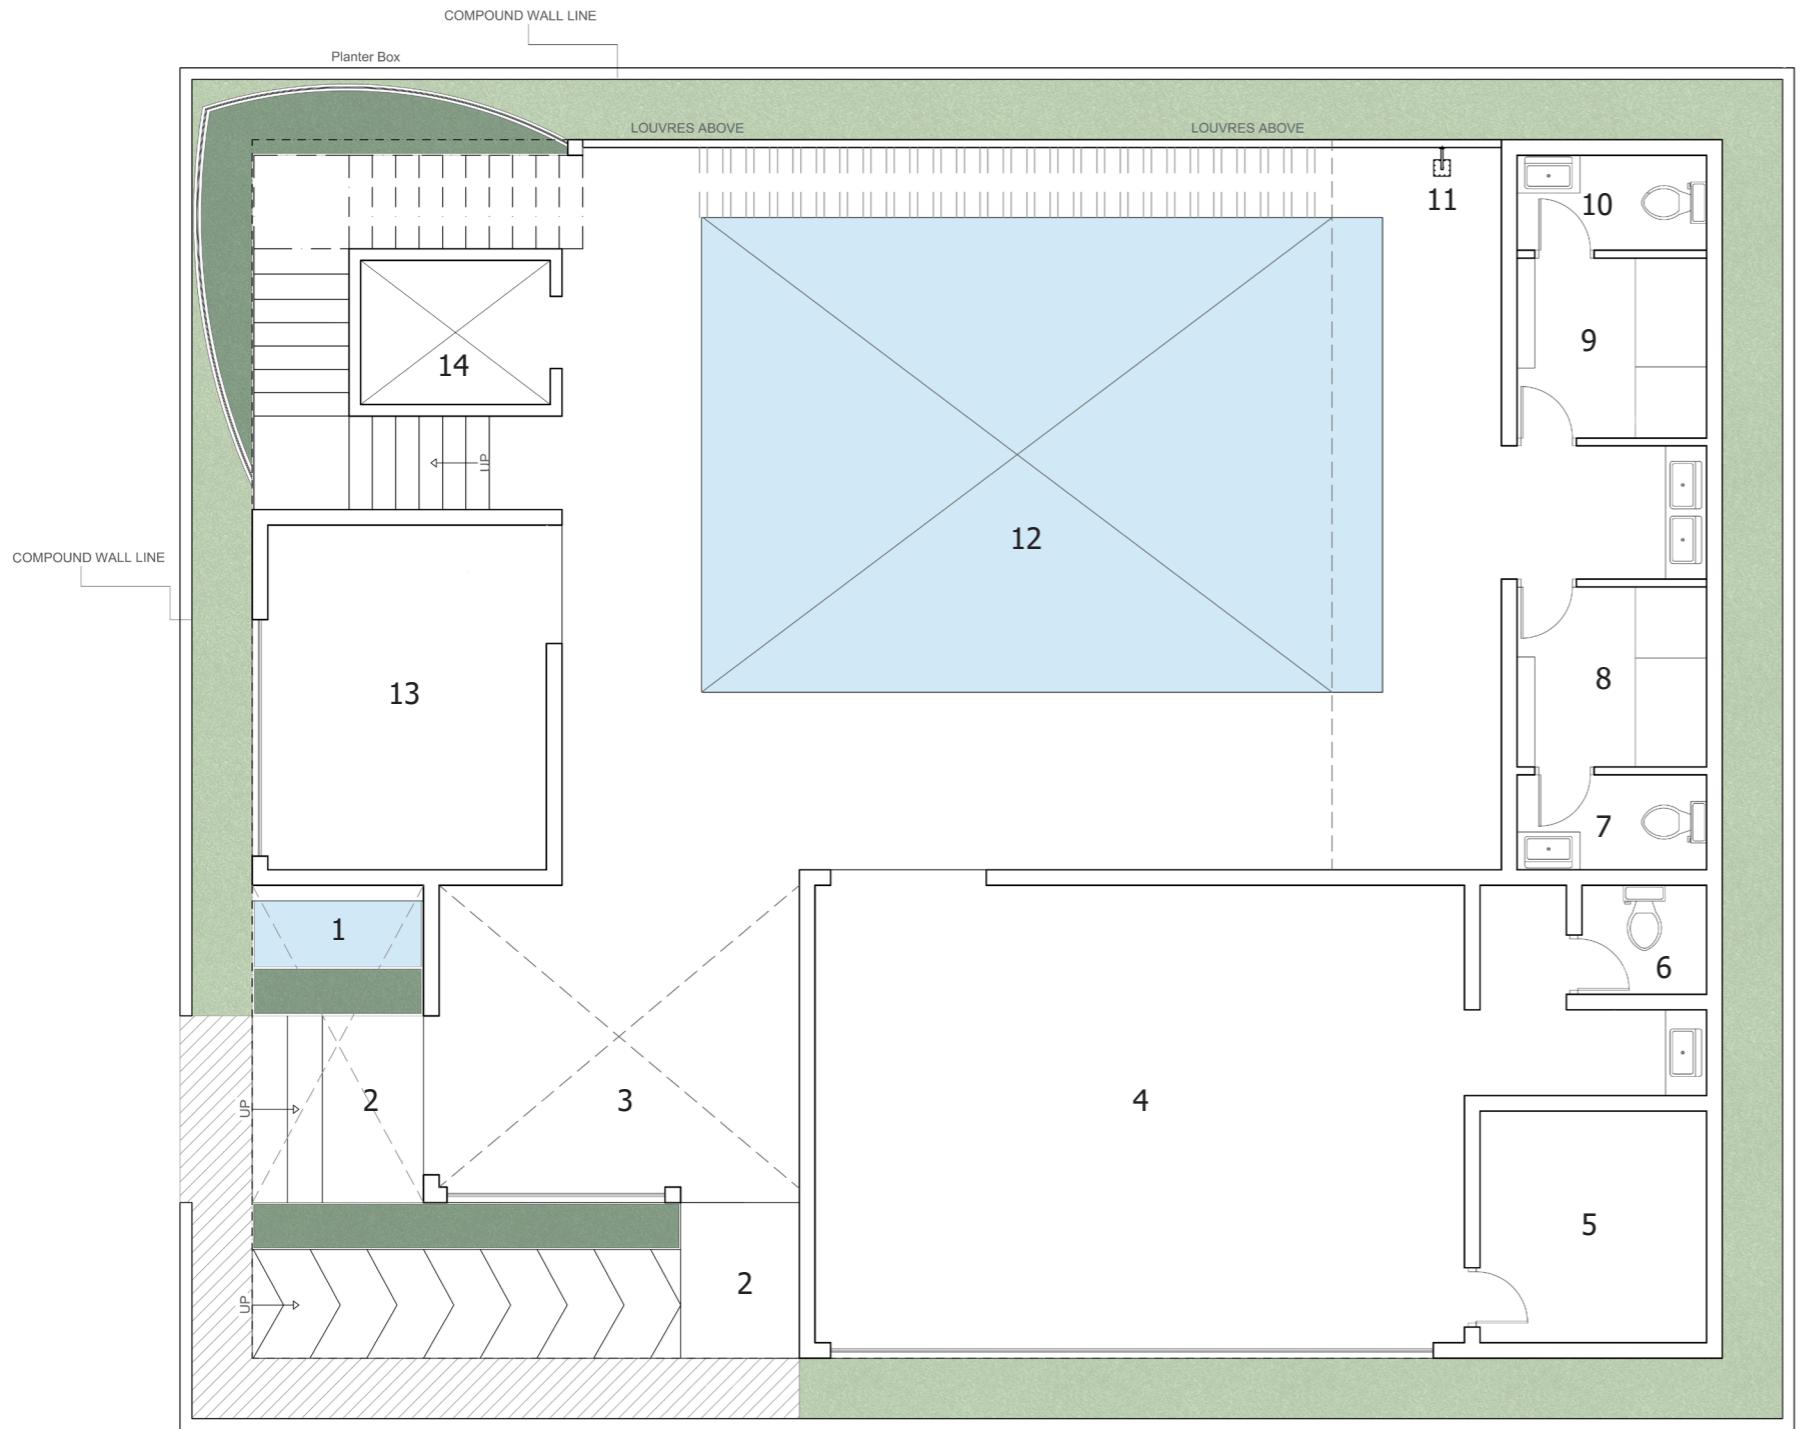

The ground floor plan of the clubhouse is thoughtfully designed to prioritize **accessibility**, with clear, wide pathways and ramps ensuring ease of movement for all users. Spaces are coordinated seamlessly, with **intuitive flow** between areas. The design integrates nature through **large glass doors and windows** that open to landscaped outdoor areas.

MATERIAL
PALETTE

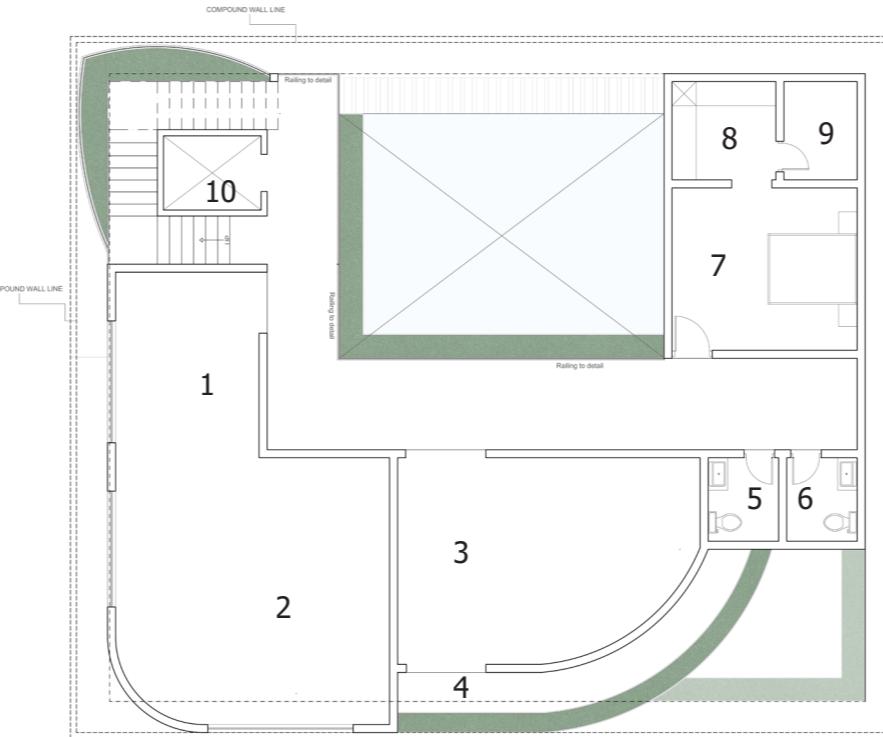

The clubhouse features a design that integrates **biophilic principles** through the use of natural and sustainable materials. **Wire-cut brick** is prominently used, offering a textured, **earthy aesthetic** while ensuring durability and low maintenance. These bricks enhance the **connection to nature** and blend harmoniously with the environment. The design prioritizes **sustainability** by incorporating materials that are both eco-friendly and long-lasting, contributing to a harmonious and efficient structure that fosters a strong connection to the natural surroundings.

KEY DESIGN HIGHLIGHTS

The architectural design emphasizes a harmonious blend of **stepped balconies**, **openness**, and a **close connection to nature**.

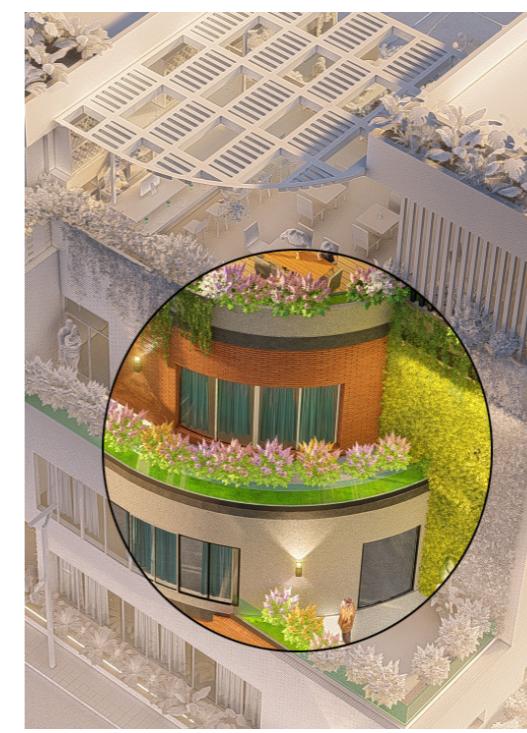

Stepped balconies create dynamic, tiered outdoor spaces that enhance both aesthetic appeal and functionality, offering users terraces with **panoramic views**.

The design prioritizes **openness** through expansive glass walls and open floor plans, fostering a sense of flow and integration with the surrounding environment.

By incorporating **natural elements** and **strategic landscaping**, the structure seamlessly merges with its natural surroundings, promoting a serene and immersive user experience with nature. This layout promotes an inclusive, functional, and nature-connected experience for all visitors.
